The present sequence is that of the coding region of the human gene (see also AAH26496) encoding novel human low density lipoprotein binding protein 2 (LBP-3, see AAH82808). The gene was isolated from a genomic DNA library using LBP-3 cDNA as probe. The LBP-3 protein predicted from the present sequence differs from that predicted from a cDNA clone (see AAB82804) in that it concains an additional 16 amino acids at its N-terminus (the cDNA is a 5' truncation) and has Asn at amino acid position 130 rather than Tyr. LBP-3 nucleic acids are among claimed to polymucleotides of the invention that encode novel polypeptides capable of binding to native and methylated LDL. Also claimed are isolated LBP colymucleotides, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. CC wethods of determining if an animal is at risk for atherosclerosis, methods for treating a cell having an abnormality in structure or companient of LBP polypeptide or nucleic acid, and vaccine compositions, are also claimed. New isolated low density lipoprotein binding polypeptide for treating, diagnosing and/or identifying therapeutic agents for atherosclerosis. Arjona AA; Claim 8; Fig 8A; 143pp; English Law SW, WPI; 2001-565505/63. P-PSDB; AAB82808. Lees RS, Lees AM,

Human proteins and DNA encoding sequences useful for preventing, or ameliorating a medical condition in a mammalian subject e.g. and cancer.

Claim 1; Page 693-694; 1963pp; English.

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA0822-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, and methods of detecting the nucleotides, corporates against the polypeptides, methods of detecting the nucleotides of the invention and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities; including cytokine, cell proliferation or cell facentialation activities; stem cell growth factor activity; differentialation activities; stem cell growth activity; climunomodulatory activity; tissue growth activities; chemokinetic activities; hemostatic, thrombootic or thrombolytic activities; the means activities; or may be involved in oncogenesis, cancer cell proliferation or metastasis.

Depending on their biological activities, polypeptides and nucleotides of

the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include cancers, haemachopielte disorders (e.g., myeloid or lymphoid cell disorders), chronic inflammatory conditions (e.g., asthma or arthritis), proliferative retinopathy, atherosclerosis, coronary heart disease, carterial ischemaia, bone disorders (e.g., osteoporosis), and abnormal vascular growth. Polypeptides involved with tissue regeneration and crepair (or nucleic acids encoding them) may be used to promote wound communomodulatory activities may be used in the treatment of viral, bacterial and fungal infections in addition to immune disorders. Co promote cell growth, For example, such polypeptides may be used to commune disorders. Co promote cell growth, For example, such polypeptides may be used to confine stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, cutoimmune disease or accidental damage. The polypeptides and nucleotides cautoimmune disease or accidental damage. The polypeptides and in drug screening techniques. The present sequence represents a cDNA encoding a covel human polypeptide of the invention 99999999999999999988

RESULT 3

```
The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAW8329-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, manumomodulatory activity and activity, insue growth factor activity, immunomodulatory activity and activity inchibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEO ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM60020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acids encoding polypeptides with cytokine-like activities, useful

The invention relates to novel human diagnostic and therapeutic polymucleotides designated dithp (ACC46080-ACC46749) and to their encoded proteins (DITHP, ABR41812). The invention also relates to polymucleotide sequences at least 90% identical to the dithp cDNA sequences of the invention; recombinant vectors, host cells and cransgenic organisms comprising a dithp mucleic acid sequence; the recombinant production of DITHP proteins; antibodies specific for DITHP compounds which specifically bind a DITHP protein; and methods of assessing the toxicity of test compounds using a dithp hybridisation of probe. Dithp mucleic acid sequences, methods of assessing the toxicity of test compounds using a dithp hybridisation of for compounds which specifically bind a DITHP protein; and methods of assessing the toxicity of test compounds using a dithp hybridisation of for a bithp mucleic acid sequences and DITHP proteins may be used in the compounds which specifically bind an DITHP protein; and other cell aspense or proble. Dithp mucleic acid sequences and DITHP proteins may be used in the city in upon or parasitic infections; hormonal disorders; bacterial, visual or parasitic infections; hormonal disorders; bacterial, citycapers; neurological disorders; gastrointesfinal disorders; transport disorders; and connective tissue disorders. They may also be used in the proteins can additionally useful in somatic or germline gene therapy of the disorders mentioned above, as a source of antisense sequences, as a source of antisense sequences, as a source of antisense content of the printed of individuals, in toxicological testing, and in transcript imaging. The present sequence represents a dithy cDNA encoding a DITHP protein which has extracellular signalling activity. Who are the sequence data for this patent did not form part of methods of the sequence of the English Claim 2; SEQ ID NO 74; 591pp;

The invention relates to novel human diagnostic and therapeutic polynucleotides designated dithp (ACC46080-ACC46749) and to their encoded proteins (DITHP, ABRA1136-ABRA1812). The invention also relates to proteins (DITHP, ABRA1136-ABRA1812). The invention also relates to polynucleotide sequences at least 90% identical to the dithp cDNA sequences of the invention; recombinant vectors, host cells and transpants comparising a dithp nucleic acid sequence; the recombinant production of DITHP proteins; attribodies specific for DITHP proteins; microarrays comprising dithp nucleic acid sequences; methods of assessing the toxicity of test compounds using a dithp hybridisation probe. Dithp nucleic acid sequences and DITHP protein; and methods of assessing the toxicity of test compounds using a dithp hybridisation probe. Dithp nucleic acid sequences and DITHP protein; and methods of assessing the toxicity of test compounds using a dithp hybridisation probe. Dithp nucleic acid sequences and DITHP protein; and cher cell cards avariate; infections; hormonal disorders; bacterial, viral, fungal or parasitic infections; hormonal disorders; transport disorders; and connective tissue disorders. They may also be used to ascent for modulators of protein activity or gene expression. DITHP proteins can additionally be used in analysis of the protecome of a tissue or cell type and to induce antibodies. The dithp nucleic acids are additionally useful in somatic or germline gene therapy of the disorders mentioned above, as a source of antisense sequences, as a source of artisense agence can an additionally be used in analysis of thuman disease or knock in humanised animals, in toxicological testing, and in transgenic and mals, in toxicological testing, and in transgenic and which has extracellular signalling activity. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

It was isolated by screening human cluver, acrots and foetal brain cDNA libraries with rabbit LBP-3 cDNA. cDNA clones (see AAV32834-39) and encoded rabbit and human LBPs (see AAV32834-39) and encoded rabbit and human LBPs (see AAV49037-42) are claimed. An abnormality in LBP metabolism or structure is diagnostic of a risk for atherosclerosis. The invention provides: methods for determining if an animal is a risk for atherosclerosis (e.g. for prenatal screening), methods for treating atherosclerosis (including gene therapy) using e.g. LBP polypeptides to bind LDL and thereby prevent therapy) using e.g. LBP polypeptides to bind LDL and thereby prevent having an abnormality in LBP structure or metabolism. Pharmaceutical and vaccine compositions are also provided, as well as recombinant vectors
                                                                                                                                                                                                                                                                                                                        540

The present sequence is that of a partial cDNA encoding novel human low density lipoprotein binding protein 3 (LBP-3, see AAB82804). Clones were isolated from human foetal brain, liver and acrta cDNA libraries using rabbit LBP-3 cDNA as probe. A full-length cDNA clone is given in AAH26501, and a genomic DNA sequence is given in AAH26497. LBP-3 nucleic acids are among claimed polymelectides of the invention that encode novel polypeptides capable of binding to native and methylated LDL. Also claimed are isolated LBP polypeptides, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPR. Methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in gruncture or metabolism of LBP are claimed. Pharmaceutical compositions comprising an LBP polypeptide or nucleic acid, and vaccine compositions.
                                                                                                                                                                                                                                                                                New isolated low density lipoprotein binding polypeptide for treating, diagnosing and/or identifying therapeutic agents for atherosclerosis.
                                                                                                                                                                           Law SW, Arjona AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This cDNA clone codes for novel rabbit low density lipoprotein (LDL) binding protein LBP-3 (see AAW49039). It was isolated by functional carrenting of a cDNA library, produced from ballon-dendothelialised healing rabbit abdominal aorta mRNA, for clones encoding LBPs able to bind both native and methyl LDL. cDNA clones (see AAV32834-39) and encoded rabbit and human LBPs (see AAW49037-42) are claimed. An encoded rabbit and human LBPs (see AAW49037-42) are claimed. An a spect of LBP metabolism or structure is diagnostic of a risk for atherosclerosis. The invention provides: methods for a risk for atherosclerosis (e.g. for crenatal screening); methods for treating atherosclerosis (including gene therapy) using e.g. LBP polypeptides to bind LDL and thereby prevent formation of atherosclerosic plaque; and methods for treating a cell formation an abnormality in LBP structure or metabolism. Pharmaceutical and vaccine compositions are also provided, as well as recombinant vectors
    Nucleic acid encoding low density lipoprotein binding proteins and talated vectors - transformed cells, proteins, and modulators of binding, useful for treatment and diagnosis of atherosclerosis and for identifying subjects at risk.
                                                                                                                                                                                                                                                                                                                                                                                                          LBP-2;

The present sequence is that of cDNA encoding novel rabbit low density lipoprotein binding protein 3 (LBP-3, see AAB82801). The CDNA was isolated following screening of a rabbit cDNA library for clones encoding LBPs that bound to both native low density lipoprotein (LDL) and methyl LDL. The invention provides claimed polynuclectides encoding novel bolypeptides which are capable of binding to native and methylated LDL, the isolated polypeptides, termed LBPs, and biologically active fragments and analogues of them, as well as expression vectors, calls and methods of producing the LBPs. Also claimed are methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a call having an abnormality in structure or metabolism of LBP. Pharmaceutical compositions are also claimed
                                                                                                                                                                              New isolated low density lipoprotein binding polypeptide for treating diagnosing and/or identifying therapeutic agents for atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 4722 BP; 997 A; 1332 C; 1430 G; 963 T; 0 U; 0 Other;

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (I). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed activity of (II) or to treapy techniques to restore normal activity of (II) or to treap disease states involving (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained electronic format directly from WIPO at

The polymetrides are useful in gene therapy, vaccines or peptide therapy. The polymeptides are useful in gene therapy, vaccines or peptide therapy. The polymeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hematopoissis regulating activity, issue growth factor activity, immunomodulatory activity and activity, issue growth factor activity, immunomodulatory activity and activity increase of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAKS2581), 2111 (AAKS2582) and 3666 (AAM80020) are omitted as the relevant pages from the

The present sequence is one such sequence. This sequence can be used for diagnosing osteoporosis/bone disease in a patient, promoting osteogenesis and/or preventing osteoporosis/bone disease. New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstruction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or

Disclosure, Page 1259-1260, 1343pp; English.

The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets conclete acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating c.g. isolaemic conditions, pulmonary vasconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive culmonary disease (CODP), and cancers such as leukaemiss, lamphomas, pulmonary disease (CODP), and cancers such as leukaemiss, lamphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONS reduces side effects. The A-containing ONS break down which the crelease of deoxyadenosine which activates adenosine receptors causing concented sequences given in the sequence listing from the present the invention, which correspond to SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:1 to 185, but the sequence of from the previously named sequences. SEQ ID NO:1 to 185, but the sequence of from the present invention. N B. Sequences given in the disclosure of the present invention. N B. Line of the present invention. On the previous of the present invention. The libration of the present invention. isting.

The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets conclide acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, cuseful for the treatment of diseases and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating confidence conditions, pulmonary vascociatriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive carcinomas, and cancers which may metastassise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the carcinomas, and cancers which activates adenosine receptors causing chronicocartriction and inflammation. AAA3333 to AAA35312 represent the nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:1 to 1860 (AAA3233 to AAA3392) are specifically claimed ONS from the present invention. N B. Sequences given in the disclosure of the present invention. N B. Contain the test of the present invention. N B. Contain the test of the present invention. N B. Contain the present invention. N B. Contain the sequences given in the sequences.

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense cligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodiator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activity and peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adhesion molecules and their receptors, central nervous system (CNS) and peripheral nervous and non-nervous system peptide receptors, defensine, growth factors, vasoactive peptides and receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allsenge or surfactors of the contraction and/or bronchoconstriction) are sociated with a disease or such and sociated s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with activating peptide factors and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central

junctions of genes encoding a polypeptide associated with lung and/or nasal airway dysfunction and a second active agent comprising an antiinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallargic, antiasthmatic, hypotensive, immunosuppressive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing levels of adenosine of, or reducing sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of ubiquinone or lung surfactant in a subject's tissue, or treating bronchocomstriction, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1373

```

junctions of genes encoding a polypeptide associated with lung and/or nasal airway dysfunction and a second active agent comprising an antiinflammatory steroid and ubiquinone. A composition of the invention as antiinflammatory, antiallergic, antiasthmatic, hypotensive, immunosuppressive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing levels of adenosine receptor, producing bronchodilation, increasing levels of adenosine receptor, ung allergies, or treating bronchoconstriction, lung surfactant in a subject's tissue, or treating bronchoconstriction, lung surfactant in a subject's tissue, or treating bronchoconstriction, lung surfactant in a subject's tissue, or treating bronchoconstriction, lung surfactant in a subject's tissue, or treating bronchoconstriction, lung surfactant in a subject's tissue, or treating bronchoconstriction, lung surfaction, but was obtained in electronic format directly from MIPO set fitp.wipo.int/pub/published_pot_sequences

cell
  growth factor which stimulates B cell proliferation and inhibits B cell differentiation, termed interleukin 14. IL-14 can be used to interfere with the replication of B cells and to treat B cell non-Hodgkin's lymphoma, systemic lupus erythematosus and systemic necrotising vaculitis. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .079 GAGGAGAAAAACAGTCCGGGGATAAAGAACTGGAGGGCCTGCAGGTAAAAATCCAACGGCTG

The present invention describes primer sets for synthesising 5602 fulllength cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonnclectide complementary to the complementary strand of a polynuclectide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonuclectide comprises a least 15 nucleotides; or (b) a combination of an oligonuclectide comprising a sequence complementary to the complementary strand of a polynuclectide which comprises a 5'-end sequence of an oligonuclectide comprising a sequence complementary to a polynuclectide which comprises a 3'-end sequence of the comprises a 3'-end sequence of complementary to a polynuclectide which comprises a 3'-end sequence, where the oligonuclectide sequence and sequence of an oligonuclectide sequence of a polynuclectide sequence of comprises a 1'-end sequence, where the oligonuclectide sequence of sequence of primers are useful for synthesising polynuclectides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length and any action and sequences; AAH13632 to AAH13632 represent thuman amino acid sequences; and AAH13629 to AAH13632 represent

The invention relates to an isolated polynucleotide comprising a sequence selected from 183 human DNA sequences (appearing as ABK70130-ABK70312), or their fragments, homologues, variants or complements and their encoded polypeptides. Also included are an expression vector comprising the polypeptides. Also included are an expression vector comprising the polynucleotide operably linked to an expression control sequence; a host cell transformed or transfected with an expression wector of, an isolated antibody, or its antigen-binding fragment that specifically binds to the polypeptide; a method for detecting the presence of a cancer in a patient of its antigen-binding fragment that specifically binds to the polypeptide; an expression wector of; a fusion protein comprising at least the polypeptide; and cancer in a patient of stringent conditions, a method for stimulating and/or expanding T cells prepared from the method of above, a composition comprising a first component consisting of carriers and immunostimulants, and a second component selected from the polymucleotides, proteins, artibodies, fusion proteins, T cell populations and antigen presenting cells expressing the polymethod; methods for stimulation and minumen response or treating cancer in a patient by administering the composition and diagnostic kits comprising at least one of the oligonucleotic of, or an antibody and detection reagent consisting of a reporter group. The polymucleotides are useful as vaccines for the treatment or prevention of tung cancer, and for diagnosis and minitoring of such cancer. The comprise in a patient by diagnosis and minitoring cells can be used to stimulate or expand T cells specific for a tumorous protein. The collymucleotides may be used as probes or primers for nucleic acid acid control inhibiting expression of tumour polypeptides and proteins in tumour cells. The present sequence is one of the 183 lung cancer associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               polynucleotides

```
modulating agent, by contacting an assay system comprising a purified HM polypeptide: (human orthologue of genes that modify the p53 pathway in for sosphila) or nucleic acid with a test agent under conditions; where but for the presence of the test agent, the system provides a reference activity, and detecting a test agent-biased activity of the assay system. Also included are modulating (M2) a p53 pathway of a cell (comprising contacting a cell defective in p53 function with a candidate modulator that specifically binds to a IM polypeptide comprising an HM amino acid sequence, where p53 function is restored), modulating (M3) a p53 pathway in a mammalian cell (comprising contacting the cell with an agent that specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4) a disease in a patient (comprising to a nucleic acid) and diagnosing (M4) expression; (c) comparing the results with a control; and (d) determining
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         invention relates to identifying (M1) a candidate p53 pathway
